Document: EP, 1118904, A1, & JP, 2000-105394, A

Explanation:

The document describes that (1) the nonlinear optical effect by the soliton effect and the Raman scattering is used to generate wavelength-variable short pulses, and further (2) the effect of mixing four light waves is used to shift the wavelength. However, the document does not describe an optical fiber in which the third harmonic is produced to generate short-wavelength pulse light of visible light wavelength range. This constitution is not considered to be obvious to a person skilled in the art either.
